How to create a unique UX combining AR with IoT

Sorin Sebastian Mircea & Cristian Epure

Siemens

Augmented reality?

AR Kit

- **Visual Inertia Odometry** - track where I am moving as I move
- **Pose is tracked via:**
 - the *Visual (camera) system*, by matching a point in the real world to a pixel on the camera sensor each frame.
 - *Inertial system* (your accelerometer & gyroscope-together referred to as the Inertial Measurement Unit or IMU)

AR Kit Object Detection

Initialize Object Detection

```
// Create a session configuration
let configuration = ARWorldTrackingConfiguration()

// Object detection
configuration.detectionObjects = ARReferenceObject.referenceObjects(inGroupNamed: "AR Object Detection", bundle: Bundle.main)!

// Run the view's session
sceneView.session.run(configuration)
```

Callback called when object is detected

```
func renderer(_ renderer: SCNSceneRenderer, nodeFor anchor: ARAnchor) -> SCNNode? {
    if let objectAnchor = anchor as? ARObjectAnchor {
        print("Detected: ", objectAnchor.name!)
    }

    return nil
}
```

AR Kit Image Detection

Interact

Initialize Object Detection

```
// Create a session configuration
let configuration = ARWorldTrackingConfiguration()

// Image detection
configuration.detectionImages = ARReferenceImage.referenceImages(inGroupNamed: "AR Image Detection", bundle: Bundle.main)!

// Run the view's session
sceneView.session.run(configuration)
```

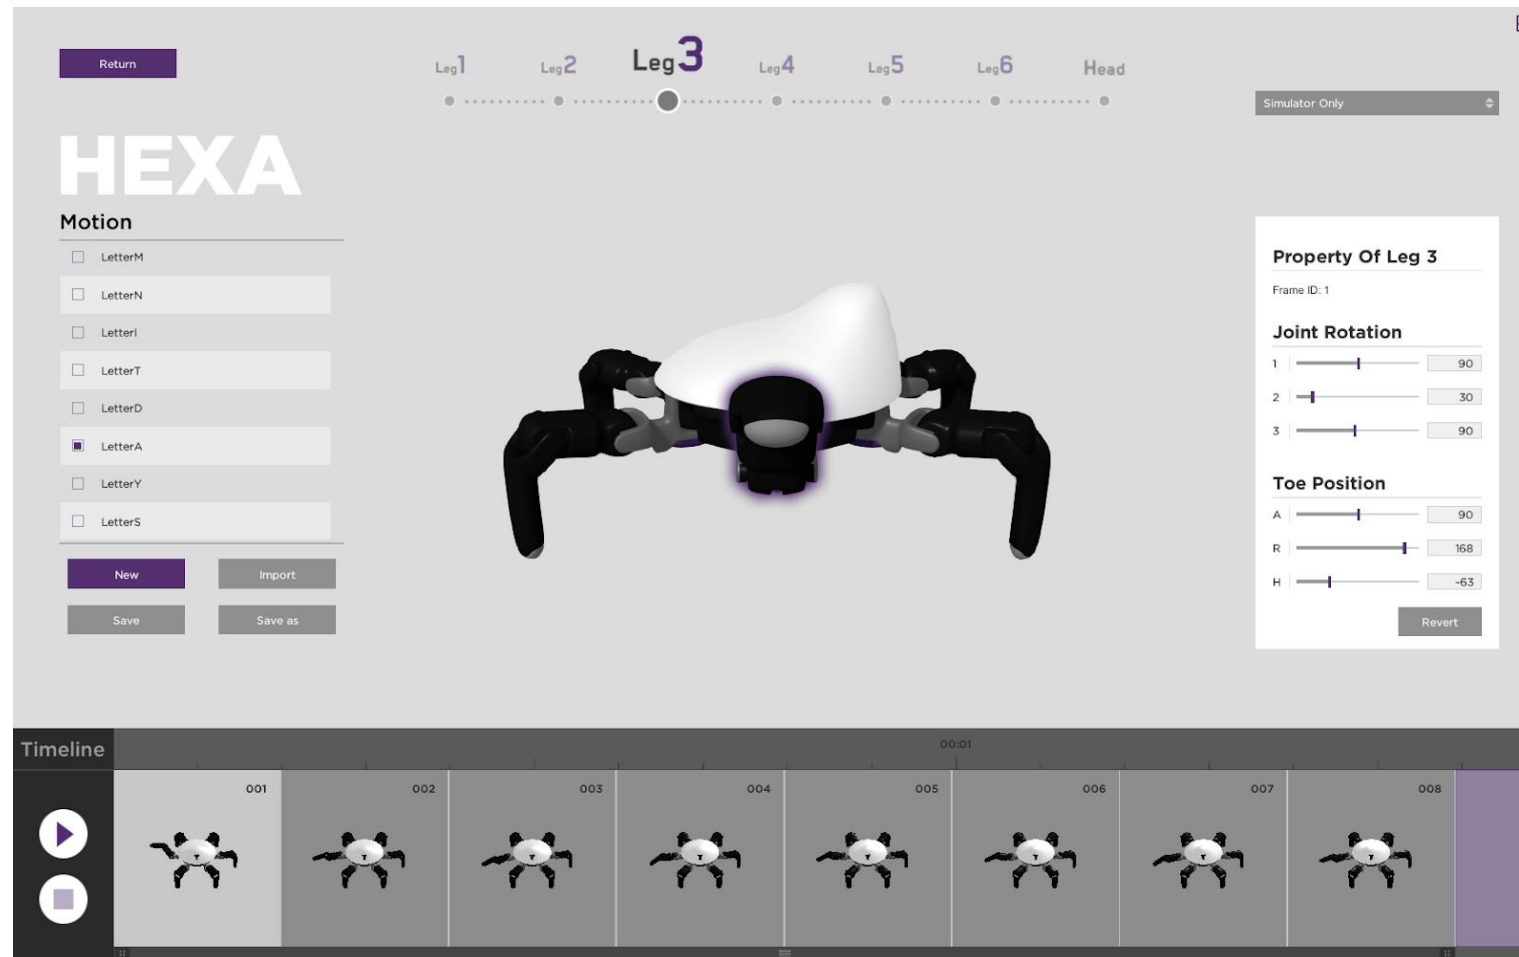

Callback called when image is detected

```
func renderer(_ renderer: SCNSceneRenderer, didAdd node: SCNNode, for anchor: ARAnchor) {
    guard let imageAnchor = anchor as? ARImageAnchor else { return }
    let referenceImage = imageAnchor.referenceImage

    // Create a plane to visualize the initial position of the detected image.
    let plane = SCNPlane(width: referenceImage.physicalSize.width, height: referenceImage.physicalSize.height)
    let planeNode = SCNNode(geometry: plane)
    planeNode.opacity = 0.25
    planeNode.eulerAngles.x = -.pi / 2
    planeNode.runAction(self.imageHighlightAction)
    node.addChildNode(planeNode)
}
```

API

```
func (d *RobotMiniProj) StartAPI() {  
    r := mux.NewRouter()  
    r.HandleFunc(path: "/writeITDAYS", d.writeITDAYS)  
    http.ListenAndServe(addr: ":8000", r)  
}
```

Animation

```
for no, degree = range acts {  
    if no == 18 {  
        go hexabody.MoveHead(float64(degree), duration)  
    } else {  
        go hexabody.MoveJoint(no/3, no%3, float64(degree), duration)  
    }  
}
```
